Call +905.357.7300 or +888.501.8916 (toll free) for
reservations. Group Name is MARAC GROUP.

< Symposium Themes >

NEW DEVELOPMENTS IN SLIMLINE BOREHOLE LOGGING

URANIUM APPLICATIONS

- U3O8 calibrations and Standards
- New Logging Techniques
- Case Histories
- Uranium Logging Economics

IN-SITU ROCK INTEGRITY AND FLOW

- New Trends in Borehole Imagery
- Fracture Characterization
- Hydrologic Importance of Fractures

MINE PLANNING and PRODUCTION

- Borehole Geophysics and Mine Planning
- Quantitative Borehole Logging for In-Situ Assay

GEOPHYSICAL LOGS IN DATABASES

- Data Management * File Nomenclature
- Petrophysical Properties

Historically, the MGLS has been a premier society for non-petroleum Log Analysts, Slimline Logging Service Companies, Manufactures, R & D groups, Geologists & Geophysicists to share current ideas and knowledge. Recent resurgence in the mining community has increased the need to re-vitalize our Society. A quorum of prior and current MGLS Members has assembled a solid team from industry and government to lead the re-vitalization. We need your background and experience at the October Symposium to bring it all together again. We plan to build a valuable member-accessible web with case histories and log analysis techniques, job postings, and historical papers. For more information please contact the people below.
